

7. Reroute Menu

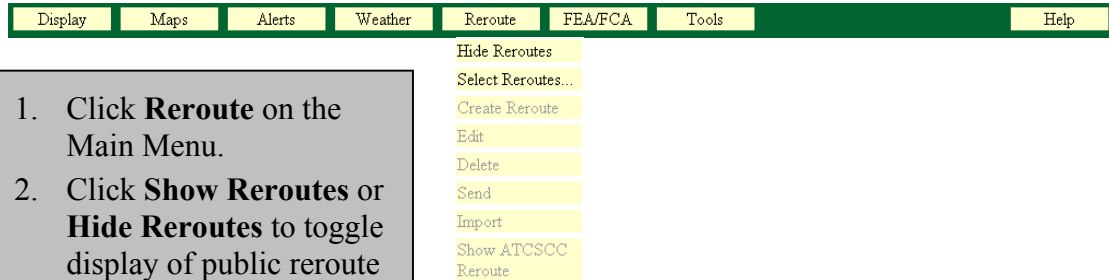

This section contains information on the command available on the Reroutes menu. Reroutes are graphic overlays showing areas where flight reroutes have been suggested due to severe weather conditions.

- **Show/Hide Reroutes**
Toggles display of reroutes on and off.
- **Select Reroutes**
Defines reroutes that are to be shown on the display.

Show/Hide Reroutes

The **Show/Hide Reroutes** command lets you toggle a display of reroutes. If no reroutes are selected in the Select Reroutes dialog box, selecting Show Reroutes will have no effect. Either Show or Hide Reroutes appears on the Reroute menu, depending on the status of the display. That is, if reroute information currently appears on the display, the Reroute menu will say Hide Reroutes. Only public reroutes are available for display.

Select Reroutes

The **Select Reroutes** command lets you specify which reroutes you want to display. This function also lets you choose colors for the display of reroutes and sort the list in the Select Reroutes dialog box by reroute names or void times. Only public reroutes are available for display.

Help

1. Click **Reroute** on Main Menu.
2. Click **Select Reroutes**.

- Hide Reroutes
- Select Reroutes...
- Create Reroute
- Edit
- Delete
- Send
- Import
- Show ATCSCC
- Reroute

After you click **Select Reroutes**, the Reroute dialog box is displayed. The dialog box contains a list of all reroutes in the database. The sample dialog box below shows reroutes sorted by Name. Reroutes can be sorted by Name or by Void Time. Clicking the **Sort by Reroute Void time** button changes the sort from Reroute Name to Void Time.

Reroute - Microsoft Internet Explorer provided by The VOLPE Center

Sort by Reroute Name
Sort by Reroute Void Time

Help

The following table explains the headers in the Select Reroute dialog box.

Select Reroutes	
Item	What You Do
Show Reroute	You cannot change the reroute definition in this dialog box. The reroute information designates airports, navaids, fixes, and jet routes.
Show Label	Click in the Label check box to toggle on and off the reroute name and the distance along the route.
Show Navaids	Click in the Navaids check box to toggle the navaids on and off the reroutes display.
Show Fixes	Click in the Fixes check box to toggle the fixes on and off the reroutes display.
Domain	The Domain indicates whether the reroute set was created as Public, Shared, or Private. You cannot edit this field.
Status	Status can be Active or Planned. You cannot edit this field.
Color	Click the Color button to display a color palette. Click your choice of color for the reroute display.
Name	Name of the reroute appears as a label, when Name is checked. You cannot edit the reroute name.
Void	Designates the time the reroute will expire. You cannot edit this field.

Info Button

A sample report is shown below, with additional information about the selected reroute set.

B6 LIST REPORT

Print Close Help

Note: Some reroutes issued by the FAA are released with a flight list, which would be displayed in the List Report section of the report. The reroute shown in this example was issued without a flight list, so the List Report section is blank.
